### PROJECT WORK

---

#### CryptoSecure Financial | [crypto-secure.vercel.app](https://crypto-secure.vercel.app)

Streamlined crypto banking and trading platform built with Nextjs, React, HTML/CSS.

Code: [github.com/Nicolas3-G/CryptoSecure](https://github.com/Nicolas3-G/CryptoSecure)

#### Applicant.io | [applicant-io.vercel.app](https://applicant-io.vercel.app)

Browser-based life and business simulation game, built with Nextjs and React.

Code: [github.com/Nicolas3-G/sim-game](https://github.com/Nicolas3-G/sim-game)

#### Nextri | [nextri.vercel.app](https://nextri.vercel.app)

Modern E-commerce web application built with Nextjs, React, and HTML.

Code: [github.com/Nicolas3-G/Nextri](https://github.com/Nicolas3-G/Nextri)

### WORK EXPERIENCE

---

#### Pre Framing Corp | Junior Software Engineer | Berkeley, CA

Apr 2023 - Present

- Spearheaded development of a web based AI Construction Assistant application, using NextJS and React
- Used React hooks: useContext, useReducer, and useState for state management
- Integrated and created RESTful APIs to fetch and display dynamic content.
- Developed authentication, authorization and analytics system leveraging MongoDB and JWT Tokens
- Utilized git & git flow to manage codebase and collaborate smoothly with team members.
- Regularly met with technical and non-technical team members and supervisors

#### PAIR Public Relations | Software Engineer Intern | San Francisco, CA

Feb 2023 - Present

- Prototyped multiple web applications for early stage startup using NextJS
- Deployed agile methodologies to iteratively plan, execute tasks and drive development.
- Leveraged 3rd party API consumption to efficiently extract and process data, streamlining data management and enhancing employee performance.

#### GrantAide | Software Engineer | San Francisco, CA

Jan 2023 - March 2023

- Developed a high-quality web application and browser extension, leveraging OpenAI LLM capabilities to provide users with a in-browser AI workstation
- Harnessed JavaScript, Node.js, and Express to facilitate HTTP requests and effectively consume data from external APIs
- Utilized Flexbox and Grid techniques in CSS to architect responsive layouts that seamlessly adapt
