TECHNICAL SKILLS

- **Proficient:** JavaScript, React, NextJS, MongoDB, Express, Node, HTML5, CSS3, npm, Python, Git, APIs, Sass
- **Exposure:** TypeScript, Figma, Redux, Django, Styled-component

PROJECT WORK

CryptoSecure Financial | crypto-secure.vercel.app

Streamlined crypto banking and trading platform built with Nextjs, React, HTML/CSS.

Code: github.com/Nicolas3-G/CryptoSecure

Applicant.io | applicant-io.vercel.app

Browser-based life and business simulation game, built with Nextjs and React.

Code: github.com/Nicolas3-G/sim-game

Nextri | nextri.vercel.app

Modern E-commerce web application built with Nextjs, React, and HTML.

Code: github.com/Nicolas3-G/Nextri

WORK EXPERIENCE

Pre Framing Corp | Junior Software Engineer | Berkeley, CA

Apr 2023 - Present

- Spearheaded development of a web based AI Construction Assistant application, using NextJS and React to deliver front end and back end solutions.
- Built numerous UI and server components using React, Next.js, and JavaScript to deliver a seamless and modern experience to the user
- Integrated and created RESTful APIs to fetch and display dynamic content.
- Demonstrated ability and willingness to learn and effectively utilize new technologies by acquiring proficiency in MongoDB and Next.js, and delivering authentication and data analyzation solutions.
- Utilized git version control to manage codebase, and collaborate smoothly with team members.
- Regularly met with technical and non-technical team members and supervisors, effectively conveying intricate technical concepts and contributing valuable engineering insights to collaborative design and planning sessions

PAIR Public Relations | Software Engineer Intern | San Francisco, CA

Feb 2023 - Present

- Prototyped multiple web applications for early stage startup using React, Next.js, and Javascript
- Engaged in proactive communication to provide regular updates to the founder on development progress
- Leveraged agile methodologies to iteratively plan, execute tasks and drive development.
- Demonstrated self-driven task management by ensuring high productivity and quality product iteration, in a hybrid environment
- Leveraged 3rd party API consumption to efficiently extract and process data from various web articles, streamlining data management and enhancing employee performance.

GrantAide | Software Engineer | San Francisco, CA

Jan 2023 - March 2023

- Developed a high-quality web application and browser extension, leveraging OpenAI LLM capabilities to provide users with a in-browser AI workstation
- Demonstrated adaptability by transitioning from a frontend-focused role to learning full stack technologies, including Node.js and Express, and applying them to deliver comprehensive solutions
- Employed proactive problem-solving skills, leveraging browser debugging tools to swiftly identify and fix bugs
- Harnessed JavaScript, Node.js, and Express to facilitate HTTP requests and effectively consume data from external APIs
- Utilized Flexbox and Grid techniques in CSS to architect responsive layouts that seamlessly adapt
