- **Exposure:** TypeScript, Figma, Redux, Django, Styled-component

## WORK EXPERIENCE

**Overview | Fullstack Software Engineer | San Francisco, CA**                    Dec 2023 - Present
- Led backend development using Node.js and Express, coordinating closely with the mobile frontend team to implement new features, ensuring seamless integration.
- Diagnosed and resolved memory leaks, achieving a 99.9% system uptime and enhancing system reliability
- Designed and implemented a robust topic recognition system using text embeddings, improving content categorization
- Maintained and managed live systems for both development and production environments
- Reduced translation costs by 30% through optimizing article content preparation
- Engineered an automated news article scraping and preparation system, using Selenium and Third Party APIs, streamlining content management processes
- Developed dynamic and responsive user interfaces using HTML, CSS, and JavaScript, enhancing user experience and engagement

**Freelance | Fullstack Engineer | San Francisco, CA**                    Dec 2023 - Present
- Collaborated with clients to define project scope and size, providing detailed, research-based breakdowns and projections for informed decision-making
- Consistently delivered projects on or before deadlines, achieving high customer satisfaction and fostering strong client relationships.
- Enhanced and integrated designs by closely working with designers and clients to implement precise layouts and visual elements, ensuring alignment with client expectation

**Pre Framing Corp | Junior Software Engineer | Berkeley, CA**                    Apr 2023 - June 2024
- Spearheaded development of a web based AI Construction Assistant application, using NextJS and React
- Developed Unreal Engine mobile application and implemented cloud patching solution
- Integrated and created RESTful APIs to fetch and display dynamic content.
- Developed authentication, authorization and analytics system leveraging MongoDB and JWT Tokens
- Utilized git & git flow to manage codebase and collaborate smoothly with team members.
- Used React hooks: useContext, useReduce, and useState for state management

**PAIR Public Relations | Software Engineer Intern | San Francisco, CA**                    Feb 2023 - May 2023
- Prototyped multiple web applications for early stage startup using NextJS
- Deployed agile methodologies to iteratively plan, execute tasks and drive development.
- Leveraged 3rd party API consumption to efficiently extract and process data, streamlining data management and enhancing employee performance by 75%.
